

ROLAND TD6/V SET-UP/HART DYNAMICS 6PC SETS

This set-up is used for Hart Dynamics Studio Master 6.4, Custom B, GigaPro and Hart Pro 6.4 Drumsets.

With this configuration, the Ride and Bell triggers on the ride cymbal are plugged in to 2 separate inputs via the Y cable. This allows for maximum control of the Ride and Bell triggering and sounds. You can use any Ride sound in combination with any Bell sound.

NOTE: Input 6 must be changed to a Bell Sound.

NOTE: You may also plug the TRS (stereo) cable from the ride cymbal in to the ECSTAD ADAPTER, and then in to the RIDE Input. This set up uses only one input and is useful if you wish to add other trigger devices (ECYMBAL, HAMMER, etc.). If you use this set-up you MUST use an "X" Ride Sound (Rock Ride, Rock Bell, "Rock X"). The "X" Ride sounds have both Ride and Bell sounds.
